## New production facilities in Korbußen

### Doubling of capacities

At BIKAR, everything revolves around aluminum, copper, brass, red brass and bronze for a wide variety of applications. With the opening of the new production facilities on a total of **17,000 m<sup>2</sup> of floor space directly on the A4**, we are laying the foundation for the future. We have more than doubled our storage capacities and our machinery in order to be able to meet your demands quickly and reliably in the future, even in times of highest demand.

State-of-the-art machinery with computer-controlled high-bay warehouses with an additional **15,000 t of stock** and over **30 new sawing systems** allow us to respond quickly and flexibly to your requirements and wishes.

# EVERYTHING

with tradition

This has resulted in one of the leading cutting centers for semi-finished nonferrous metal products, in which state-of-the-art saws are directly connected to a **120-meter-long high-bay warehouse**.

Also unique in its dimensions is the **production center for face-milled aluminum cast plates**. In 2 production lines, aluminum ingots are effectively and efficiently cut into plates as well as face-milled precision plates are produced here.

You can obtain many dimensions from us in stock directly from the warehouse - it doesn't get any faster than that.

Let us convince you of our qualities and test us!

## Our promise:

- Fast delivery times due to large warehouse stocks
- Favorable prices due to high degree of automation
- Super material and processing quality by most modern machines
- Personal support and prompt quotations by a qualified team of employees
- Suitable material through wide portfolio
