### **EN AW-2017A**

### Aluminium and aluminium alloys

#### Alloy designation:

EN AW	Al Cu4 Mg Si(A)
Old designation	Al Cu Mg1
Material no. according to DIN	3.1325
Great Britain BS	-
Italy UNI	9002/2
Spain	L-3120
Sweden	-
Norway	-
France AFNOR	A-U4G
Colour code	RAL 6002 Leaf Green

### Typical physical properties:

Density [g/cm³]		2,80
Elastic modulus [GPa]		72,5
Thermal conductivity [	W/m*K]	130 – 200
	-50°C – 20°C	
Thermal expansion	20°C – 100°C	23,0
coefficient[K-1*10-6]	20°C – 200°C	
	20°C – 300°C	
Specific heat J/(kg * K)		
Electrical conductivity [m/Ω*mm²]		18 – 28
Shear modulus [GPa]		27,2

### Chemical composition<sup>x</sup> (EN 573-3):

Specifications in % Remainder: Aluminium					Othe	er							
Si	Fe	Cu	Mn	Mg	Cr	Ni	Zn	Ti	Ga	V	Note	Individual	Total <sup>2</sup>
0,20 - 0,80	0,70	3,5 – 4,5	0,40 - 1,0	0,40 - 1,0	0,10	-	0,25	-	-	-	0,25 Zr+Ti	0,05	0,15
X Chemical specifications as perc. of weight. If no ranges are specified, the alloy content has the maximum value.													
2 Includes all items listed for which no limit values are specified.													

### Special features of this material:

- Very good machinability
- High strength
- High fatigue strength
- Curable

### **Applications:**

- Machine construction
- High-strength constructions
- Aerospace
- Military technology

#### Available forms:

Sheets · Plates · Cuttings · Circular blanks · Rings · Bars · Tubes · Wires · Parts from drawings

### **WORLD OF METALS**

### **Heat treatment:**

Soft annealing / recrystallisation annealing		
Annealing temperature	380°C – 420°C	
Heating-up time	2 – 3 hours	
Cooling conditions	Cooling conditions 30°C/h to 250°C, below 250°C in air	

Hardening	
Solution annealing	495°C – 505°C
Quenching	water
Natural ageing treatment	5 – 8 days
Artificial ageing treatment	-

#### Other data:

#### Processing / machinability

Soft annealed	4
Work-hardened	3
Heat-treated	1 – 2
Dimensional stability	4
Erosion	1

#### Surface treatment

Anodising - (protective anodisation)	2
Special anodising quality (EQ) <sup>EQ</sup>	-
Anodising - decorative	5
Painting / coating	3
Polishing	1

Welding		Filler metal
Gas	5	
WIG	5	
MIG	5	
Resistance welding	1	

### Solder

Brazing with flux	5
Brazing without flux	5
Abrasion soldering	3
Soft soldering with flux	5

#### Corrosion resistance

In a normal atmosphere/ weather conditions	4
Sea water atmosphere	4 – 5

### Metal forming

Cold forming		Delivery condition
Bending	2	0
Pressure forming	3	Ο
Deep drawing (condition-based)	3	0
Upsetting (condition-based)	3	Ο
Impact extrusion	3	0
Hot forming		
Drop forging	3	
Extrusion moulding	4	
Hammer forging	3	

Suitable for food industry according to DIN EN 602	no
Working temperatures	approx. 135 °C – 145 °C (long-term), approx. 180 °C – 190 °C (short-term)

### Legend:

- 1 very good
- 2 good
- 3 moderate
- 4 poor5 unsuited
- EQ anodising quality must be ordered separately and confirmed

The specifications in our data sheets are subject to correction and are only valid as references. Liability is excluded in this regard. We reserve the right to make changes to the standards and informative values. The agreements of our order confirmation are always authoritative. With regard to anodic oxidisability, we point out that we accept no liability for the anodisation result and the colour formation for decorative applications. The same applies to the corrosion resistance. Special arrangements must be made in writing.

O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically reated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature and naturally aged.	H14	Work-hardened - 1/2 hard.
H19 Work-hardened - extra hard. H22 Work-hardened and re-annealed - 1/4 hard. H24 Work-hardened and re-annealed - 1/2 hard. H26 Work-hardened and re-annealed - 3/4 hard. H27 Work-hardened and re-annealed - 3/4 hard. H28 Work-hardened and stabilised - 1/4 hard. H39 Work-hardened and stabilised - 1/4 hard. H30 Work-hardened and stabilised - 1/2 hard. H31 Work-hardened and stabilised - 1/2 hard. H32 Work-hardened and stabilised - 1/2 hard. H33 Work-hardened and stabilised - 1/4 hard. H34 Work-hardened and stabilised - 1/4 hard. H35 Work-hardened and enamelled - 1/2 hard. H40 Work-hardened and enamelled - 1/2 hard. H41 Work-hardened and enamelled - 1/2 hard. H42 Work-hardened and enamelled - 1/2 hard. H43 Work-hardened and enamelled - 1/2 hard. H44 Work-hardened and enamelled - 3/4 hard. H45 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H564 Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state. H565 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermonechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.	H16	Work-hardened - 3/4 hard.
H22 Work-hardened and re-annealed - 1/4 hard. H24 Work-hardened and re-annealed - 1/2 hard. H26 Work-hardened and re-annealed - 3/4 hard. H28 Work-hardened and re-annealed - 4/4 hard (fully through-hardened). H32 Work-hardened and stabilised - 1/4 hard. H34 Work-hardened and stabilised - 1/2 hard. H36 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H42 Work-hardened and enamelled - 1/4 hard. H44 Work-hardened and enamelled - 1/2 hard. H46 Work-hardened and enamelled - 1/2 hard. H48 Work-hardened and enamelled - 3/4 hard (fully through-hardened). H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H50 Work-hardened - Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state. H50 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.	H18	Work-hardened - 4/4 hard (fully through-hardened).
H24 Work-hardened and re-annealed - 1/2 hard. H26 Work-hardened and re-annealed - 3/4 hard. H28 Work-hardened and re-annealed - 4/4 hard (fully through-hardened). H32 Work-hardened and stabilised - 1/4 hard. H34 Work-hardened and stabilised - 1/2 hard. H36 Work-hardened and stabilised - 3/4 hard. H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H42 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H44 Work-hardened and enamelled - 1/2 hard. H44 Work-hardened and enamelled - 1/2 hard. H46 Work-hardened and enamelled - 3/4 hard. H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H27 H28 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H28 Work-hardened - Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state. H28 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.	H19	Work-hardened - extra hard.
H26 Work-hardened and re-annealed - 3/4 hard. H28 Work-hardened and re-annealed - 4/4 hard (fully through-hardened). H32 Work-hardened and stabilised - 1/2 hard. H34 Work-hardened and stabilised - 1/2 hard. H36 Work-hardened and stabilised - 3/4 hard. H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H42 Work-hardened and enamelled - 1/4 hard. H44 Work-hardened and enamelled - 1/2 hard. H46 Work-hardened and enamelled - 1/2 hard. H47 Work-hardened and enamelled - 3/4 hard. H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H48 Work-hardened - Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state. H4x5 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.	H22	Work-hardened and re-annealed - 1/4 hard.
H28 Work-hardened and re-annealed - 4/4 hard (fully through-hardened). H32 Work-hardened and stabilised - 1/4 hard. H34 Work-hardened and stabilised - 1/2 hard. H35 Work-hardened and stabilised - 3/4 hard. H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H39 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H39 Work-hardened and enamelled - 1/4 hard. H39 Work-hardened and enamelled - 1/2 hard. H39 Work-hardened and enamelled - 3/4 hard. H39 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H30 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H30 Work-hardened - Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state. H30 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	H24	Work-hardened and re-annealed - 1/2 hard.
H32 Work-hardened and stabilised - 1/4 hard. H34 Work-hardened and stabilised - 1/2 hard. H36 Work-hardened and stabilised - 3/4 hard. H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H42 Work-hardened and enamelled - 1/4 hard. H44 Work-hardened and enamelled - 1/2 hard. H44 Work-hardened and enamelled - 3/4 hard. H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H27 Hardened and enamelled - 4/4 hard (fully through-hardened). H28 Work-hardened and enamelled - 4/4 hard (fully through-hardened). H29 Work-hardened - Applies for welded tubes. Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.	H26	Work-hardened and re-annealed - 3/4 hard.
H34 Work-hardened and stabilised - 1/2 hard. H38 Work-hardened and stabilised - 3/4 hard. H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H42 Work-hardened and enamelled - 1/4 hard. H44 Work-hardened and enamelled - 1/2 hard. H46 Work-hardened and enamelled - 3/4 hard. H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). Hxx4 Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state. Hxx5 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	H28	Work-hardened and re-annealed - 4/4 hard (fully through-hardened).
H36 Work-hardened and stabilised - 3/4 hard. H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened). H42 Work-hardened and enamelled - 1/4 hard. H44 Work-hardened and enamelled - 1/2 hard. H46 Work-hardened and enamelled - 3/4 hard. H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). Hxx4 Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state. Hxx5 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot formed and naturally aged.	H32	Work-hardened and stabilised - 1/4 hard.
H38 Work-hardened and stabilised - 4/4 hard (fully through-hardened).  H42 Work-hardened and enamelled - 1/4 hard.  H44 Work-hardened and enamelled - 1/2 hard.  H46 Work-hardened and enamelled - 3/4 hard.  H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened).  Hxx4 Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state.  Hxx5 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41). T2 Quenched from the hot formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	H42	Work-hardened and enamelled - 1/4 hard.
H48 Work-hardened and enamelled - 4/4 hard (fully through-hardened). Hxx4 Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state.  Hxx5 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	H44	Work-hardened and enamelled - 1/2 hard.
Hxx4 Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state.  Hxx5 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot formed and naturally aged.  Solution annealed, cold formed and naturally aged.	H46	Work-hardened and enamelled - 3/4 hard.
Hxx5 Work-hardened - Applies for welded tubes.  O Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.  Solution annealed, cold formed and naturally aged.	H48	Work-hardened and enamelled - 4/4 hard (fully through-hardened).
Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	Hxx4	Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state.
by the hot-forming process.  O1 Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).  O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.  O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.  Solution annealed, cold formed and naturally aged.	Hxx5	Work-hardened - Applies for welded tubes.
O2 Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example. O3 Homogenised. T1 Quenched from the hot forming temperature and naturally aged. T2 Quenched from the hot forming temperature, cold formed and naturally aged. T3 Solution annealed, cold formed and naturally aged.	Ο	
O3 Homogenised.  T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	01	Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).
T1 Quenched from the hot forming temperature and naturally aged.  T2 Quenched from the hot forming temperature, cold formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	02	Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.
T2 Quenched from the hot forming temperature, cold formed and naturally aged.  T3 Solution annealed, cold formed and naturally aged.	O3	Homogenised.
T3 Solution annealed, cold formed and naturally aged.	T1	Quenched from the hot forming temperature and naturally aged.
, , , ,	T2	Quenched from the hot forming temperature, cold formed and naturally aged.
T31 Solution annealed, about 1% cold formed and naturally aged.	T3	Solution annealed, cold formed and naturally aged.
	T31	Solution annealed, about 1% cold formed and naturally aged.

### **WORLD OF METALS**

	T351	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and naturally aged. The products are not readjusted after stretching.
	T3510	Solution annealed, stress relief by controlled stretching (stretching degree 1% to 3 % for extruded bars, profiles and tubes, 0.5% to 3 % for drawn tubes) and naturally aged. The products are not readjusted after stretching.
	T3511	As T3510, but slight subsequent readjustment to comply with the specified limits of size allowed.
	T352	Solution annealed, stress relief by 1% to 5% permanent upsetting and naturally aged.
	T354	Solution annealed, stress relief by cold readjustment in the finisher and naturally aged.
	T36	Solution annealed, about 6% cold formed and naturally aged.
J	T37	Solution annealed, about 7% cold formed and naturally aged.
	T39	Solution annealed and a certain degree of cold forming to achieve the specified mechanical properties. Cold forming can be done before or after the natural ageing treatment.
	T4	Solution annealed and naturally aged.
	T42	Solution annealed and naturally aged. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer.
	T451	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and naturally aged. The products are not readjusted after stretching.
	T4510	Solution annealed, stress relief by controlled stretching (stretching degree: 1% to 3 % for extruded bars, profiles and tubes, 0.5% to 3 % for drawn tubes) and naturally aged. The products are not readjusted after stretching.
ı	T4511	As T4510, but slight subsequent readjustment to comply with the specified limits of size allowed.
	T452	Solution annealed, stress relief by 1% to 5% permanent upsetting and naturally aged.
	T454	Solution annealed, stress relief by cold readjustment in the finisher and naturally aged.
	T5	Quenched from the hot forming temperature and artificially aged.
	T51	Quenched from the hot forming temperature and not fully artificially aged to improve malleability.
ı	T56	Quenched from the hot forming temperature and artificially aged - better mechanical properties than T5 by special process control (alloy of 6000 series).
	T6	Solution annealed and artificially aged.
	T61	Solution annealed and not fully artificially aged to improve malleability.
	T6151	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates) and then not fully artificially aged to improve malleability. The products are not readjusted after stretching.
	T62	Solution annealed and artificially aged. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer.
	T64	Solution annealed and then not fully artificially aged to improve malleability (between T6 and T61).
	T651	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and artificially aged. The products are not readjusted after stretching.
	T6510	Solution annealed, stress relief by controlled stretching (stretching degree 1% to 3 % for extruded bars, profiles and tubes, 0.5% to 3 % for drawn tubes) and artificially aged. The products are not readjusted after stretching.
	T6511	As T6510, but slight subsequent readjustment to comply with the specified limits of size allowed.
	T652	Solution annealed, stress relief by 1% to 5% permanent upsetting and artificially aged.
	T654	Solution annealed, stress relief by cold readjustment in the finisher and artificially aged.

### **Delivery conditions**

T66	Solution annealed and artificially aged - better mechanical properties than T6 by special control of the process (alloy of 6000 series).
T7	Solution annealed and overcured (artificially aged).
T73	Solution annealed and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking.
T732	Solution annealed and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer.
T7351	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking. The products are not readjusted after stretching.
T73510	Solution annealed by stress relief by controlled stretching (stretching degree: 1% to 3% for extruded rods, profiles and pipes, 0.5% to 3% for drawn tubes) and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking. The products are not readjusted after stretching.
T73511	As T73510, but slight subsequent readjustment to comply with the specified limits of size allowed.
T7352	Solution annealed, stress relief by 1% to 5% permanent upsetting and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking.
T7354	Solution annealed, stress relief by cold readjustment in the finisher and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking.
T74	Solution annealed and overcured (artificially aged) (between T73 and T76).
T7451	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and overcured (artificially aged) (between T73 and T76). The products are not readjusted after stretching.
T74510	Solution annealed, stress relief by controlled stretching (stretching degree; 1% to 3 % for extruded bars, profiles and tubes, 0.5% to 3 % for drawn tubes) and overcured (artificially aged) (between T73 and T76). The products are not readjusted after stretching.
T74511	As T74510, but slight subsequent readjustment to comply with the specified limits of size allowed.
T7452	Solution annealed, stress relief by 1% to 5% permanent upsetting and overcured (artificially aged) (between T73 and T76).
T7454	Solution annealed, stress relief by cold readjustment in finisher and overcured (artificially aged) (between T73 and T76).
T76	Solution annealed and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion.
T761	Solution annealed and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion (applies to sheets and strips made of material 7475).
T762	Solution annealed and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer.
T7651	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion. The products are not readjusted after stretching.
