## Shaping your own career right from the start

**An apprenticeship at BIKAR-METALLE GmbH lays the foundation stone**

**Bad Berleburg-Raumland.** There is an open and friendly working atmosphere at the Wittgenstein-based family company BIKAR-METALLE GmbH. Trainees are fully integrated into the various departments from day one, and all of the approximately 300 employees at the headquarters in Bad Berleburg-Raumland, as well as the additional 300 employees at locations worldwide, are always happy to help with any questions.

The metal trader with Europe's largest cutting center supplies companies in a wide range of industries worldwide with non-ferrous metals in the form of plates, sheets, blanks, bars, profiles and tubes. Throughout the company's 58-year history, the management has placed great emphasis on innovation and sometimes thinks unconventionally around the corner. That is why BIKAR-METALLE is today a modern and future-oriented employer, firmly rooted in the Eder Valley and family-run in the third generation.

"We have grown steadily in recent years. This allows us to train and promote more and more motivated people in our company. With us, they learn everything from scratch for a promising career in the metal trade, whether in the industrial or commercial sector," reports former trainee and current authorized signatory and training manager Ingo Miß about the training strategy of BIKAR-METALLE GmbH.

In addition to industrial training as a specialist for warehouse logistics (m/f/d) or as a machine and plant operator (m/f/d) as well as commercial training as an industrial clerk (m/f/d) or merchant in wholesale and foreign trade management (m/f/d), it is also possible to complete training as an IT specialist for application development (m/f/d) at BIKAR. With an average retention rate of over 90%, the medium-sized company, which is currently investing again in its headquarters in Bad Berleburg, offers its trainees long-term prospects with good opportunities for advancement.

To get the best out of the trainees, they are given responsibility right from the start. Ingo Miß talks about the possibilities of training at BIKAR: "Own projects and a run through the most different departments demand a lot from our trainees, but this also gives them the opportunity to identify their own strengths and interests and to specialize. Even after the apprenticeship, we support them with further qualifications, such as a degree."
