

PRESS RELEASE

Expanding where production grows: BIKAR METALS ASIA starts operations in Malaysia

Seremban, July 2026 – BIKAR METALS is establishing its largest international subsidiary to date in Malaysia. With BIKAR METALS ASIA, the company sets a clear signal for growth and strengthens its long-term commitment to the aerospace, semiconductor and high-tech industries across Asia.

Aerospace and advanced manufacturing continue to shift east. Supply chains are becoming more global, more interconnected and more demanding. Customers operate worldwide and BIKAR actively aligns its structure to support them wherever production takes place.

Largest international expansion – clear commitment to Asia

Malaysia has been a key market for BIKAR for many years. With the foundation of BIKAR METALS ASIA, the company creates a permanent presence on the Malay Peninsula and brings its proven production-focused approach from Europe and India directly to the ASEAN region.

Located in Sendayan TechValley in Seremban, approximately one hour south of Kuala Lumpur, the new 10,000 m² facility positions BIKAR at the heart of one of the world's most dynamic industrial regions. From here, the company serves major ASEAN markets including South Korea, Thailand and Vietnam. Designed as a fully digital lean-production environment, the plant will feature advanced cutting and processing technology and storage capacity of up to 5,000 tonnes. Operations will start in autumn 2026.

Seamless supply across ASEAN and beyond

BIKAR delivers production-aligned supply built around real manufacturing requirements: cut-to-size aluminium plates, sheets and extrusions, synchronised deliveries and digitally connected processes. By embedding material flow directly into production, the company reduces complexity, minimises handling and enhances planning stability.

The Malaysian site works in close coordination with BIKAR METALS INDIA LTD., creating a strong regional platform across Asia. Fully integrated into BIKAR's global network and connected to its main plants in Germany, the sites combine local responsiveness with international production standards and digital transparency.

Sasidharan Kanan, an experienced industry specialist with deep regional expertise, will lead the new site. "With our new facility in Sendayan, we are bringing production-aligned supply closer to our customers across ASEAN. Our goal is clear: to combine strong local expertise with BIKAR's global capabilities and ensure stable, reliable material flow for aerospace and high-tech programmes throughout the region," says Sasidharan Kanan. Under his leadership, BIKAR METALS ASIA will act as a direct interface for customers across ASEAN, combining strong local market knowledge with the capabilities of BIKAR's global network.

About BIKAR AEROSPACE

BIKAR AEROSPACE is the aerospace division of the BIKAR METALS Group, specializing in high-performance aluminium solutions and precision-machined components. Founded in 1962, the BIKAR Group employs around 1,200 people across its international operations in Europe and Asia. Over decades, the company has built a strong reputation in metal distribution and processing, combining deep material expertise with continuously evolving manufacturing and digital capabilities. BIKAR combines material supply, machining and digital systems into efficient, reliable processes – designed to meet the demands of high-performance industries.
