CERTAL®SPC rolled · stretched · forged · compressed

Aluminium and aluminium alloys

Specially for tool making, mould making and model making rolled · stretched · forged · compressed

Alloy designation:

Special type	AA 7122	
Old designation	Al Zn5 Mg3 Cu (Special type)	
Special type: optimised for high core strength and optimal dimensional stability for higher strengths		

Typical physical properties:

Density [g/cm³]		2,76
Elastic modulus [GPa]		72
Thermal conductivity [N/m*K]	120 – 150
	-50°C – 20°C	
Thermal expansion	20°C – 100°C	23,6
coefficient[K-1*10-6]	20°C – 200°C	
	20°C – 300°C	
Specific heat J/(kg * K)		
Electrical conductivity [m/Ω*mm²]		18 – 22
Shear modulus [GPa]		

Chemical composition^x (EN 573-3):

Specifications in % Remainder: Aluminium							Other						
Si	Fe	Cu	Mn	Mg	Cr	Ni	Zn	Ti	Ga	V	Note	Individual	Total ²
0,50	0,50	0,50 - 1,0	0,10	2,6 - 3,7	0,10	-	4,3 – 5,2	-	-	-	Ti + Zr 0,25	-	-
X Chemical specifications as perc. of weight. If no ranges are specified, the alloy content has the maximum value.													
2	2 Includes all items listed for which policit values are specified												

Special features of this material:

- Optimised for high core strength and optimal dimensional stability for higher strengths
- Very good machinability

Applications:

- Tool making, mould making and model making
 - Blow moulds, injection moulds, die casting moulds and vacuum tools
- Laminating tools
- Pressing technique
- Anvil cap and stamp holder
- Machine construction
 - Structures with high strength requirements

Available forms:

Sheets · Plates · Cuttings · Circular blanks · Rings · Parts from drawings

Working temperatures	Long-term to 110°C

Legend:

- 1 very good
- 2 good
- 3 moderate
- 4 poor
- EQ anodising quality must be ordered separately and confirmed
- a Welding for repair or modification of tools possible with local influence on the strength and hardness
- Unsuitable for mechanically stressed connection welds

The specifications in our data sheets are subject to correction and are only valid as references. Liability is excluded in this regard. We reserve the right to make changes to the standards and informative values. The agreements of our order confirmation are always authoritative. With regard to anodic oxidisability, we point out that we accept no liability for the anodisation result and the colour formation for decorative applications. The same applies to the corrosion resistance. Special arrangements must be made in writing.

Delivery conditions

F	Production state (no limit values for mechanical properties defined).
H111	Annealed and slightly work-hardened by subsequent operations, e.g. stretching or adjustment (less than H11).
H112	Slightly work-hardened by hot forming or limited cold forming (with defined limit values of the mechanical properties).
H116	Applies to aluminium-magnesium alloys with a magnesium content > = 4% for which the limit values of the mechanical properties and the resistance to exfoliation corrosion are defined.
H12	Work-hardened - 1/4 hard.
H14	Work-hardened - 1/2 hard.
H16	Work-hardened - 3/4 hard.
H18	Work-hardened - 4/4 hard (fully through-hardened).
H19	Work-hardened - extra hard.
H22	Work-hardened and re-annealed - 1/4 hard.
H24	Work-hardened and re-annealed - 1/2 hard.
H26	Work-hardened and re-annealed - 3/4 hard.
H28	Work-hardened and re-annealed - 4/4 hard (fully through-hardened).
H32	Work-hardened and stabilised - 1/4 hard.
H34	Work-hardened and stabilised - 1/2 hard.
H36	Work-hardened and stabilised - 3/4 hard.
H38	Work-hardened and stabilised - 4/4 hard (fully through-hardened).
H42	Work-hardened and enamelled - 1/4 hard.
H44	Work-hardened and enamelled - 1/2 hard.
H46	Work-hardened and enamelled - 3/4 hard.
H48	Work-hardened and enamelled - 4/4 hard (fully through-hardened).
Hxx4	Applies to embossed or stamped metal sheets or strips, which are produced from the corresponding Hxx state.
Hxx5	Work-hardened - Applies for welded tubes.
0	Soft annealed - With the O state, products can be designated for which the required properties for the soft annealed state are achieved by the hot-forming process.
O1	Thermally treated almost at the solution annealing temperature and time and cooled slowly to room temperature (formerly known as T41).
O2	Thermomechanically treated to improve formability as required for Superplastic Forming (SPF), for example.
O3	Homogenised.
T1	Quenched from the hot forming temperature and naturally aged.
T2	Quenched from the hot forming temperature, cold formed and naturally aged.
T3	Solution annealed, cold formed and naturally aged.
T31	Solution annealed, about 1% cold formed and naturally aged.

WORLD OF METALS

Solution annealed, stress relief by controlled stretching (stretching degree 1% to 3 % for extruded bars, profiles and fubes, 0.5% to 3 % for extruded bars, profiles and fubes, 0.5% to 3 % for drawn tubes) and naturally aged. The products are not readjusted after stretching. As T3510, but slight subsequent readjustment to comply with the specified limits of size allowed. Solution annealed, stress relief by cold readjustment to specify and naturally aged. Solution annealed, stress relief by cold formed and naturally aged. Solution annealed, about 8° cold formed and naturally aged. Solution annealed, about 8° cold formed and naturally aged. Solution annealed, about 8° cold formed and naturally aged. Solution annealed and a certain degree of cold forming to achieve the specified mechanical properties. Cold forming can be done before or after the natural ageng freetrent. Solution annealed and naturally aged. Applies to fest materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer. Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for relied or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and naturally aged. The products are not readjusted after stretching. Solution annealed, stress relief by controlled stretching (stretching degree: 1% to 3 % for extruded bars, profiles and fubes, 0.5% to 3% for formated part products are not readjusted after stretching. Solution annealed, stress relief by 16 5% permanent upsetting and naturally aged. T4511 As T4510, but slight subsequent readjustment to comply with the specified limits of size allowed. The products are not readjusted after stretching. T6511 As T6510, but slight subsequent readjustment to comply with the specified limits of size allowed.	T451	3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and naturally aged. The products are not
T452 Solution annealed, stress relief by 1% to 5% permanent upsetting and naturally aged. T454 Solution annealed, stress relief by cold readjustment in the finisher and naturally aged. T5 Quenched from the hot forming temperature and artificially aged. T61 Quenched from the hot forming temperature and artificially aged to improve malleability. T66 Quenched from the hot forming temperature and artificially aged - better mechanical properties than T5 by special process control (alloy of 6000 series). T6 Solution annealed and artificially aged. T61 Solution annealed and not fully artificially aged to improve malleability. T615 Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates) and then not fully artificially aged to improve malleability. The products are not readjusted after stretching. T62 Solution annealed and artificially aged. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer. T64 Solution annealed and then not fully artificially aged to improve malleability (between T6 and T61). T651 Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and artificially aged. The products are not readjusted after stretching. T6510 Solution annealed, stress relief by controlled stretching (stretching degree 1% to 3 % for extruded bars, profiles and tubes, 0.5% to 3 % for drawn tubes) and artificially aged. The products are not readjusted after stretching. T6511 As T6510, but slight subsequent readjustment to comply with the specified limits of size allowed. T652 Solution annealed, stress relief by 5% permanent upsetting and artificially aged.	T4510	
T454 Solution annealed, stress relief by cold readjustment in the finisher and naturally aged. T5 Quenched from the hot forming temperature and artificially aged. T61 Quenched from the hot forming temperature and not fully artificially aged to improve malleability. T62 Quenched from the hot forming temperature and artificially aged - better mechanical properties than T5 by special process control (alloy of 6000 series). T63 Solution annealed and artificially aged. T64 Solution annealed and not fully artificially aged to improve malleability. T65 Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates) and then not fully artificially aged to improve malleability. The products are not readjusted after stretching. T65 Solution annealed and artificially aged. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer. T66 Solution annealed and then not fully artificially aged to improve malleability (between T6 and T61). T67 Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and artificially aged. The products are not readjusted after stretching. T67 Solution annealed, stress relief by controlled stretching (stretching degree 1% to 3 % for extruded bars, profiles and tubes, 0.5% to 3% for drawn tubes) and artificially aged. The products are not readjusted after stretching. T67 As T6510, but slight subsequent readjustment to comply with the specified limits of size allowed. T67 Solution annealed, stress relief by 1% to 5% permanent upsetting and artificially aged.	T4511	As T4510, but slight subsequent readjustment to comply with the specified limits of size allowed.
Quenched from the hot forming temperature and artificially aged. Title Quenched from the hot forming temperature and not fully artificially aged to improve malleability. Delivery conditions

T66	Solution annealed and artificially aged - better mechanical properties than T6 by special control of the process (alloy of 6000 series).
T7	Solution annealed and overcured (artificially aged).
T73	Solution annealed and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking.
T732	Solution annealed and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer.
T7351	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking. The products are not readjusted after stretching.
T73510	Solution annealed by stress relief by controlled stretching (stretching degree: 1% to 3% for extruded rods, profiles and pipes, 0.5% to 3% for drawn tubes) and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking. The products are not readjusted after stretching.
T73511	As T73510, but slight subsequent readjustment to comply with the specified limits of size allowed.
T7352	Solution annealed, stress relief by 1% to 5% permanent upsetting and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking.
T7354	Solution annealed, stress relief by cold readjustment in the finisher and overcured (artificially aged) to achieve an optimum resistance to stress corrosion cracking.
T74	Solution annealed and overcured (artificially aged) (between T73 and T76).
T7451	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and overcured (artificially aged) (between T73 and T76). The products are not readjusted after stretching.
T74510	Solution annealed, stress relief by controlled stretching (stretching degree; 1% to 3 % for extruded bars, profiles and tubes, 0.5% to 3 % for drawn tubes) and overcured (artificially aged) (between T73 and T76). The products are not readjusted after stretching.
T74511	As T74510, but slight subsequent readjustment to comply with the specified limits of size allowed.
T7452	Solution annealed, stress relief by 1% to 5% permanent upsetting and overcured (artificially aged) (between T73 and T76).
T7454	Solution annealed, stress relief by cold readjustment in finisher and overcured (artificially aged) (between T73 and T76).
T76	Solution annealed and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion.
T761	Solution annealed and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion (applies to sheets and strips made of material 7475).
T762	Solution annealed and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion. Applies to test materials that are heat-treated from the soft annealed or F state or for products that are heat-treated from any state by the consumer.
T7651	Solution annealed, stress relief by controlled stretching (stretching degree: 0.5% to 3% for sheets, 1.5% to 3% for plates, 1% to 3% for rolled or cold reshaped bars, 1% to 5% for forgings or forged and rolled rings) and overcured (artificially aged) to achieve a good resistance to exfoliation corrosion. The products are not readjusted after stretching.

BIKAR METALLE

A COMPANY THAT CAN SIMPLY DO MORE!

Modern technologies make us powerful, flexible and allow us to provide the best quality!

Computer-controlled high bay warehouse for

- Standard plates: Capacity 1,000 containers at 5,000 kg
- Super formats and plain milled plates: Capacity 800 containers at 3,500 kg

Band saws

- Horizontal up to sizes of 6,020 x 3,020 x 1,150 mm
- Vertical up to sizes of 4,020 x 2,300 x 1,150 mm

Buzz saws

• Up to sizes of 6,050 x 6,050 x 170 mm

Blank saws and ring saws

• Up to a diameter of 2,500 mm

Deep hole drilling

- Up to 1,100 mm depth
- Thread up to dia 70 mm

Milling

- Precision surface cutter (portal milling machine) cutter head dia 2.700 mm
- Up to 6000 x 2,500 x 5-150 mm
- Surface cutter for individual depth up to 1,000 x 800 x 300 mm

Chamfering

• 45° up to about 4 mm chamfer

Usual sawing tolerances

- Band saws (sawing tolerance: +2 to 3/-0 mm)
- Circular blanks according to drawing (sawing tolerance: +8 to 10/-0 mm) depending on the type of pre-cut part
- Precision circular saws (sawing tolerance according to thickness: +-0.2 to +-0.5 mm) up to max. cutting height of 170 mm

Other tolerances by arrangement

OUR DELIVERY PROGRAM

DIVERSITY FROM A SINGLE SOURCE

BIKAR has learned over many decades to adapt to the needs of its customers. And that's reflected in the diversity of our stocked and available products. You can only win with a strong partner.

ALUMINIUM

- Plates
- Sheets
- Bars
