## **BIKAR LOGISTICS strengthens market position: 16 new trucks create additional capacity for industry and SMEs**

With four new 15-tonne trucks and twelve 40-tonne MAN trucks, BIKAR LOGISTICS is significantly expanding its own fleet. The investment strengthens the company's national and cross-border transport operations and creates additional opportunities, particularly for external customers.

**Bad Berleburg, 18 September 2026** – BIKAR LOGISTICS is continuing its growth trajectory and further strengthening its position as one of the major freight forwarding companies in the Siegen-Wittgenstein region. With 16 additional trucks, the company is creating new transport capacity for industrial customers and SMEs – both within and outside the BIKAR Group.

Four new trucks in the 15-tonne class are being added to the fleet, providing greater flexibility for shipments with lower load volumes. They are joined by twelve new 40-tonne MAN trucks, significantly increasing BIKAR LOGISTICS' capacity for national and cross-border transport operations.

The company's own fleet, which already comprises more than 60 vehicles, is therefore growing considerably. For existing and new customers, this means greater transport availability, a high degree of flexibility and short response times.

### **Available capacity for external customers**

Over the past few years, BIKAR LOGISTICS has evolved from the logistics provider for its own group of companies into an established freight forwarding partner in the external market. Today, the company transports far more than just goods for the BIKAR Group, making available capacity specifically accessible to external customers from industry and the SME sector.

Its range of services extends from less-than-truckload and full-truckload shipments (LTL/FTL) and regular transport services to the transportation of handling-sensitive materials and non-standard cargo up to three metres wide. Crane-loadable trucks and side loading provide additional flexibility for special transport requirements. A key advantage is the nationwide distribution of the fleet. BIKAR LOGISTICS trucks are on the road throughout Germany all week, allowing new transport orders to be

flexibly integrated into existing routes. In many cases, goods can therefore be collected or delivered at short notice – even outside the major metropolitan areas. For customers, BIKAR LOGISTICS therefore offers a compelling alternative to large nationwide freight forwarders: a powerful in-house fleet combined with personal contacts, short decision-making processes and many years of experience in transporting demanding goods.

## **Growth that puts drivers at the heart of it**

The expansion of the fleet also reflects BIKAR's corporate culture. The twelve new MAN trucks will not simply be delivered to the company site. Instead, BIKAR LOGISTICS drivers will personally take delivery of their new vehicles during a joint event in Munich before driving them back to Bad Berleburg.

This deliberately puts the spotlight on the people who are out on the roads of Germany and Europe for BIKAR LOGISTICS every day. Their experience and commitment are fundamental to the company's performance. Taking delivery of the new vehicles together also embodies what the BIKAR FAMILY stands for: appreciation, team spirit and a willingness to work together across departmental boundaries.

## **More vehicles, more possibilities**

Alongside expanding its capacity, BIKAR LOGISTICS focuses on making intelligent use of its growing fleet. Available cargo space is used strategically for additional shipments, helping to reduce empty runs and enabling economical and resource-efficient transport solutions.

"With the 16 additional vehicles, we are consistently continuing our growth trajectory and creating tangible new capacity for our customers. Today, BIKAR LOGISTICS is far more than the logistics provider for the BIKAR Group: we are an established freight forwarding partner for industry and SMEs, and we intend to further strengthen our position in the external market. To achieve this, we offer existing and new customers a strong in-house fleet, a high degree of flexibility and, above all, an experienced team they can rely on," says Maximilian Taube, Chief Production & Logistics Officer.

## About BIKAR LOGISTICS

BIKAR LOGISTICS is the freight forwarding and logistics service provider of the BIKAR Group, offering tailored transport solutions for industry and SMEs. With its own modern fleet, a strong network of logistics partners and strategically located sites in Bad Berleburg, North Rhine-Westphalia, and Korbußen, Thuringia, the company provides flexible and reliable transport services throughout Germany and beyond. Its range of services includes less-than-truckload and full-truckload shipments (LTL/FTL), regular transport services and works transport, as well as the transportation of handling-sensitive materials and non-standard cargo. The portfolio is complemented by solutions in supply chain management and intralogistics. BIKAR LOGISTICS combines more than 60 years of experience in goods transportation with short response times, digital vehicle tracking and modern document management.
